Project Design Phase-II Customer Journey Map

Date	18 October 2022		
Team ID	PNT2022TMID37822		
Project Name	Natural Disasters Intensity Analysis And Classification Using Artificial Intelligence		
Maximum Marks	4 Marks		

CUSTOMER JOURNEY MAP

*

Document an existing experience

Narrow your focus to a specific scenario or process within an existing product or service. In the **Steps** row, document the step-by-step process someone typically experiences, then add detail to each of the other rows.

As you add steps to the experience, move each these "Five Es" the left or right depending on the scenario you are documenting.

				dependi	s' time einer or right. ding on the scenario e documenting.
Natural disasters intensity analysis and classification using Al	Entice How does someone initially become aware of this process?	Enter What do people experience as they begin the process?	Engage In the core moments in the process, what happens?	Exit What do people typically experience as the process finishes?	Extend What happens after the experience is over?
Steps What does the person (or group) sypically experience?	Users become aware of the AI model through the advertisements and social media social media protecting agencies	Video frames captured for the intensity analysis	Classifies the natural disaster and tells the intensity of tells the intensity of disaster	Determination of the nature and the nature and extent of disaster disaster disaster disaster is predicted.	Establishing link with government Helpline, Awareness and organizations for Mitigation Accusting Systems
Interactions What interactions do they have at each step along the way? = People: Who do they see or talk to? = Places: Where are they? = Things: What digital touchpoints or physical objects would they use?	Interaction with people who are familiar with product	Use of hardware on screen interfaces to communicate technical experts	Interaction with scientists and disaster analysers monitoring	Communicate their feedback to service providers Contact the helpfine in case of disaster detection	Interaction with the comment of the comme
Goals & motivations At each step, what is a person's primary goal or motivation? ("Help me" or "Help me avoid")	Simple user friendly in the field of natural disaster classification	To make full use of the functionality of the functionality of the model	Improved response time Accurate prediction	Examining the numbers of fetalities, injuries	Ensuring better service to customers Improvisation based on feedback provided
Positive moments What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?	Motivated to save human and property property disaster classification	Delightful user interface experience learning model using DL.	Designing light weight Web Application of model	Periodic forecasting without interruption Climates Ensuring Robust Operation across terrains and climates	Examining the financial damage caused Implementing Helpline, Awareness and Threshold Actuating Systems
Negative moments What steps does at typical person find steps does an option grand find frustrating, confusing, angering, costly, or time-consuming?	Time consuming analysis Complexity of algorithms	Fear of losing data Costly hardware and software components	Collection of large set of data is time consuming Training of model	Failure due to wethold itsues Anger due to some error in results	Examining the false triggering and correcting it
Areas of opportunity How might we make each step better? What ideas do we have? What have others suggested?	Increased brand Advertising the loyalty model to public	Betterment of accuracy in prediction Retrieval of Training and testing data	Designing light weight Web Application Addition of more number of data	Optimizing the AI Model with respect to real word environment	Maximizing the uptime of the Web App Service Examining the false triggering and correcting it
